

LY053

AGGRESSIVE TREAD DESIGN TO CONQUER ANY ROUGH SURFACE

AGGRESSIVE TREAD DESIGN TO CONQUER ANY ROUGH SURFACE

As an aggressive, drive-axle radial for off-road use, the LY053 is ideal for logging, construction or rock and quarry operations, with limited highway use. The LY053 is an excellent choice for on- and off-road surfaces, designed primarily to deliver excellent tire mileage in applications that require outstanding traction and cutting/chipping resistance.

Aggressive Lug Design

provides excellent traction and braking on rough roads with mud or gravel; self cleaning for ease of maintenance.

Wide Tread Footprint

combined with a 31/32" tread depth ensures excellent tire mileage.

Thick Undertread

helps dissipate heat and allows the casing to operate at cooler temperatures.

Steel-Cord Top Belt

helps protect against penetration damage and rust while minimizing tread distortion and heat generation.

Special Tread Compound

resists fatigue, chipping and scaling in rugged off road conditions.
